

Northstar Demo Laboratory

Document compression test fixture

Report ID: DEMO-2026-0042
Issued: 25 Jun 2026

Patient: Example Person	Date of birth: 01 Jan 1990
Sample: Synthetic dataset	Status: Testing only

Complete blood count

Test	Result	Unit	Reference interval	Flag
Hemoglobin	13.7	g/dL	12.0–16.0	
Hematocrit	41.2	%	36.0–46.0	
White blood cells	6.42	10 ⁹ /L	4.00–10.00	
Platelets	247	10 ⁹ /L	150–400	
Mean cell volume	89.4	fL	80.0–100.0	
Demo marker alpha	0.073	µg/L	0.010–0.060	H

Metabolic panel

Test	Result	Unit	Reference interval
Sodium	140	mmol/L	136–145
Potassium	4.3	mmol/L	3.5–5.1
Creatinine	0.84	mg/dL	0.50–1.10
Glucose	92	mg/dL	70–99
Albumin	4.4	g/dL	3.5–5.2

This fixture contains deliberately small text, decimal values, Unicode symbols and table borders. It exists only to evaluate whether local image and PDF compression keeps documents legible.

Additional synthetic measurements

The second page verifies that PDF processing preserves page count, selectable text, vector lines and repeated embedded content.

Detailed values

Code	Value	Precision check	Comment
SYN-001	0.000137	137×10^{-6}	Must remain readable
SYN-002	12.0459	± 0.0031	Fine decimal detail
SYN-003	98.7654	$\mu\text{mol/L}$	Unicode unit
SYN-004	1,024	$\text{cells}/\mu\text{L}$	Thousands separator
SYN-005	< 0.01	negative	Comparison symbol

Compression review prompts

1. Can every digit be distinguished at 200% zoom?
2. Can this paragraph still be selected and copied?
3. Are thin table borders continuous?
4. Does the processed PDF still contain exactly two pages?
5. Is the processed file actually smaller than the original?

No values on this page correspond to a real person, diagnosis, laboratory or medical decision.
